

SUREN SIMONYAN

Senior Backend Engineer · Yerevan, Armenia · Open to Remote

simoniansuren@gmail.com | (+374) 33 033-730 | [LinkedIn](#) | [GitHub](#)

SUMMARY

Backend engineer specializing in distributed systems where correctness under concurrency is critical. Experience designing and building payment systems, settlement engines, and multi-tenant SaaS platforms with strong guarantees against duplicate transactions and data inconsistencies. Background in medicine; transitioned to software engineering in 2021.

SKILLS

Languages & Runtimes: Node.js, TypeScript, JavaScript, C#

Frameworks: NestJS, Express.js, ASP.NET Core, ABP Framework

Databases & ORMs: PostgreSQL, MongoDB, Redis, MSSQL · TypeORM, Prisma, Drizzle, Entity Framework Core

System Design & Architecture: Clean Architecture, DDD, Multi-tenancy, Microservices, Event-driven Architecture

Messaging & Async Processing: BullMQ, RabbitMQ, NATS

Cloud & DevOps: AWS, Azure, Docker, Kubernetes, CI/CD (GitHub Actions, GitLab CI)

Payment Systems: NMI, Stripe, Authorize.net, idempotent transactions, settlement workflows

Observability & Reliability: Prometheus, Grafana, Pino

EXPERIENCE

BitBreeze

Mar. 2025 – Present

Senior Backend Engineer

Paydan — Multi-tenant fintech SaaS platform

- Designed backend architecture from scratch (NestJS, TypeScript, PostgreSQL) using Clean Architecture, DDD, and strict multi-tenant isolation with per-tenant configuration; serves 10 tenants (~100 users) in production (team of 6)
- Developed payment processing module (NMI) with idempotent transaction handling; implemented a strategy-pattern gateway abstraction to enable additional payment providers without core logic changes
- Designed cross-domain workflows (appointment → checkout, estimate → checkout) coordinating multiple business entities
- Introduced asynchronous processing with BullMQ and Redis, improving system reliability and fault tolerance
- Integrated real-time transaction updates and notifications using WebSockets (Socket.IO)
- Developed business logic for POS systems, inventory syncing, and reconciliation processes

SitePlant — Construction-asset management SaaS platform (.NET/ABP Framework)

- Developed and maintained a 9-service microservices backend (team of 8) for asset tracking, hire-management workflows, and real-time job-site cost allocation across 15 tenants (~200 users)
- Integrated third-party telematics (Flespi) and hire company data feeds (e.g., live hire reports, GPS/accelerometer trackers) to automate asset assignment and alerting
- Designed and implemented secure RESTful APIs serving both web and mobile clients for equipment checkout, off-hire, and utilization reporting

SmartSoft

Mar. 2023 – Mar. 2025

Middle Node.js Developer

Sportsbook MVP — Real-time betting system

- Built a bet engine supporting single and parlay bets across multiple market types
- Designed and implemented a settlement engine ensuring race-condition-safe payout processing
- Built an idempotent payout pipeline using MongoDB change streams and BullMQ queues to prevent duplicate payouts

City Transport Ticketing System — IoT-integrated payments

- Designed and built the backend for a city transport payment system integrated with IoT terminals
- Implemented idempotent transaction processing and retry-safe workflows to prevent duplicate charges
- Developed support for NFC cards, QR payments, and debit/credit card processing

Smart Corner

May 2022 – Mar. 2023

Junior/Middle Node.js Developer

- Developed REST APIs and third-party integrations; delivered features across the full lifecycle: implementation, testing, and production release

Inomma

Jan. 2022 – Apr. 2022

Node.js Intern

- Built REST API endpoints, implemented JWT authentication and authorization, and designed PostgreSQL schemas

EDUCATION

Armenian Code Academy (ACA)

2021 – 2022

JavaScript Development

Yerevan State Medical University (YSMU)

2018 – 2021

Medical Residency

Yerevan State Medical University (YSMU)

2009 – 2018

Master's Degree in Medicine
